Analogue comfort telephone

Analogue comfort telephone for the commercial and private sector

tiptel 140

tiptel 160

Whether as an extension phone on a telephone system or an individual unit using an external line, the tiptel 140 and tiptel 160 comfort telephones provide excellent value for money. As a basic model the tiptel 140 even offers eleven speed dialing stations for saving call numbers and a high quality hands-free function. Thanks to individually adjustable ringing tone melodies and a clearly visible LED, it is easy to see at any given moment which unit has a call – even in offices with several work-places. Alternatively, the LEDs can be controlled via correspondingly equipped PABX systems to inform, for example, a hotel guest that he/she has received a personal message (message-waiting-

indication). For optimal use in combination with a hearing device, the receiver of the tiptel 140 is equipped with a magnetic field generator.

The tiptel 160 comfort telephone also has a four-line display with easy menu guidance as well as a phonebook that can hold up to 135 entries. The CLIP function shows the call number or the name of the caller that has been saved in the phonebook. The last 60 call numbers recorded remain saved in a call list from which the return call can be easily and comfortably made.

Professional users will also appreciate the headset connection on the tiptel 160.

- Clearly visible LED for visual call signaling and message waiting indication
- Hands-free
- Compatible with hearing devices (integrated magnetic field generator)
- 16 different call signals can be set
- Suitable for wall mounting
- Call number display (CLIP: FSK/DTMF)*
- Telephone book for 135 entries*
