

Answering Machine with Caller ID Display (CLIP)* tiptel 215 plus

With its exceptional functions, the tiptel 215 plus is ideally suited for personal use. The tiptel 215 plus stores announcements up to two minutes long and provides a recording time of up to 40 minutes for incoming messages. You can even screen messages while they are being recorded and pick up at any time while the person is talking.

If the caller's number is transmitted along with the call, you'll see who's calling or – based on a caller list – who called when you were unable to get to the phone. To call back, you only need to push a button on the tiptel 215 plus and the connection to the other person

is already going through. The phone numbers of important callers can be allocated a VIP status. When a call from a VIP phone number is transmitted to the tiptel 215 plus, it provides a special ring tone indicating, for example, that it's a friend or family member calling.

To access your machine remotely, simply set up a three-digit personal code. Extensive options – such as the announcement of callers' phone numbers when you were unable to pick up the phone – make the tiptel 215 plus a versatile mailbox with functions that you can access and use remotely.

- Digital answering machine with up to 40 minutes of recording time
- Two separate announcements of up to 2 minutes each (one announcement with incoming message recording, one without)
- Caller ID display (CLIP)*
- VIP function that signals incoming calls from important callers with a special tone
- Call list of the last 69 phone numbers and VIP call list of the last 24 phone numbers
- Direct callback to callers from the call lists and also while messages are playing
- Large LCD display and voice prompts for optimal operability
