

## ISDN feature phone with integrated answering machine tiptel 293

Are you looking for an answering machine for your ISDN connection? You will be surprised about the functions and features available in the integrated speech memory of the tiptel 293.

You can benefit from a total recording capacity of 50 minutes and can assign 6 multiple subscriber numbers to 6 individual outgoing messages.

It is thus possible to distinguish between business and private incoming calls and to answer them accordingly. Furthermore, the tiptel 293 is very appropriate as an "information centre" because the outgoing messages are – apart from the capacity – not restricted in time.

In addition to features like message transfer, day/time control and sophisticated remote interrogation functions, an integrated answering machine is integrated which can bear the comparison with stand-alone devices in every respect. If you hold many telephone calls per day, the tiptel 293 will certainly convince you due to the PC software with TAPI interface which is included in the delivery. The configuration of standard Windows-CTI programs (such as, e. g., MS Outlook) thus can easily be carried out. Let the tiptel 293 work for you and focus yourself on the more essential things: your telephone conversations.

- telephone directory for 100 phone numbers with names and registration of call charges
- answering machine with a recording capacity of 50 minutes and message transfer function
- 6 multiple subscriber numbers (MSN) with individual outgoing messages each, separate activation of answering mode and individual registration of call charges
- remote control of call forwarding (CFU) for up to 5 MSNs
- 14 programmable multifunctional keys (for telephone numbers, settings)
- Quick-Call-by-Call, comfortable selection of a different provider
- time control of the answering machine according to weekday and time

## Highlights

- telephone directory for 100 phone numbers with names and registration of call charges
- answering machine with a recording capacity of 50 minutes and message transfer function
- 6 multiple subscriber numbers (MSN) with individual outgoing messages, separate activation of answering mode and individual registration of call charges
- remote control of call forwarding (CFU) for up to 5 multiple subscriber numbers
- 14 programmable multifunctional keys (for telephone numbers, settings)
- Quick-Call-by-Call, comfortable selection of a different provider
- time control of the answering machine according to weekday and time
- TAPI driver for Windows® 98 / ME / NT® 4.0 / XP supports standard CTI programs such as MS Outlook
- PC connecting cable as well as software included for data back-up, dialling via PC and software updates

## Telephone functions

- 2-line alphanumeric display with digital contrast control
- display with backlight
- administration of 6 multiple subscriber numbers (MSN)
- 14 speed dialling keys
- individual macro-programming of speed dialling keys (phone numbers, functions, providers)
- comfortable use of different network providers (max. 14 providers) by Quick-Call-by-Call
- telephone directory for 100 entries (phone number, name, charge counter)
- appointment manager for 30 appointments
- extended redialling function with storage of the last 20 dialled phone numbers
- fully automatic redialling in case of busy tone
- dialling and pick-up of calls from any TAPI-compatible Windows application (CTI)
- 10 ringing tone melodies (each melody with 10 different speeds), individual ringing tone for each MSN possible
- automatic ringing tone volume control (volume increases after each ring)
- call list for 20 entries with documentation of date, time and MSN
- call back list for 6 entries (completion of call to busy subscriber, CCBS)
- call filter (certain phone numbers will not be signalled)
- VIP function (certain phone numbers will be signalled also during "do-not-disturb function")

- loudspeaker, hands-free mode
- registration of call charges in a sum, individually for each MSN, per entry and for the S0 bus
- different possibilities to block dialling and operation (dialling, entry, settings, numeral block, phone numbers)
- direct call, do-not-disturb function
- time control of call forwarding function and answering mode according to time and day
- battery back-up in case of power shortage
- update of operating software via ISDN line

## Answering machine functions

- flash memory, 50 minutes recording capacity for incoming messages, no data loss in case of power shortage
- 6 different outgoing messages (OGMs), assignment to the MSNs possible
- one additional general pre-recorded OGM for "plug & answer" (this OGM cannot be modified)
- two-way conversation recording
- display of answering mode also by LED
- voice-day-and-time-stamp after each ICM for documentation of date and time
- display of remaining capacity of speech memory
- individual activation of answering mode for each MSN possible
- message transfer to any telephone number
- immediate call transfer (even during a conversation) to the answering machine
- voice guidance for remote control
- message function, VIP function
- remote change of call forwarding and message transfer

## PC software functions

- compatible with Windows® 98 / ME / NT® 4.0 / 2000 / XP
- programming of features
- entry of data for telephone directory
- management and assignment of call data (phone numbers, charges etc.)
- dialling from the telephone directory via integrated dialler
- storage of OGMs, ICMs and ringing tones in the PC
- conversion of OGMs and ICMs into wav files and vice versa
- update of operating software, current firmware release is ready for download on our home-page [www.tiptel.com](http://www.tiptel.com)
